

May 3, 2021

The Honorable Debbie Stabenow
Chairwoman
Committee on Agriculture, Nutrition, & Forestry
U.S. Senate
Washington, DC 20510

The Honorable John Boozman
Ranking Member
Committee on Agriculture, Nutrition, &
Forestry U.S. Senate
Washington, DC 20510

The Honorable David Scott
Chairman
House Committee on Agriculture
Washington, DC 20515

The Honorable Glenn Thompson
Ranking Member
House Committee on Agriculture
Washington, DC 20515

Dear Chairwoman Stabenow, Ranking Member Boozman, Chairman Scott, and Ranking Member Thompson,

Thank you for your support for agricultural research, education, Extension, and innovation. As you consider new initiatives to support rural America and investments in the agricultural economy, we strongly urge you to include a federal agricultural research infrastructure investment of \$11.5 billion over a period of five years at U.S. colleges of agriculture. Such an investment is necessary to advance the critical work being done at institutions across the country to support American jobs, recruit a diversity of talent for the agricultural science pipeline, address our climate challenges, and ensure ongoing U.S. leadership in food and agricultural innovation.

Modern agricultural research and education facilities serve as the backbone of the nation's cutting-edge research and applied science solutions. A report recently assessed the state of facilities at U.S. colleges and schools of agriculture, reporting that 69 percent of these buildings are at the end of their useful life. The report estimated the cost to upgrade deferred maintenance for these buildings now as \$11.5 billion, and the cost to replace the dilapidated facilities as \$38.1 billion. It further stated that strategic federal investment in these facilities at 1862, 1890, 1994, and insular land-grant and non-land-grant schools of agriculture would create 200,000 new jobs nationwide. Finally, this investment would contribute to solving the need for the U.S. to recruit and graduate 60,000 new U.S. graduates with agricultural expertise every year.

The pandemic has laid bare gaps and challenges in the American economy, but also demonstrates that the research, education, and Cooperative Extension outreach performed by the nation's colleges of agriculture have never been more relevant. The U.S. cannot rebuild our agricultural research prominence or keep up with international competitors when our research is done in facilities from the 1950s and 1960s. A transformative investment of \$11.5 billion in agricultural research infrastructure at colleges of agriculture would be a significant first step in an overall strategy to ensure that the U.S. remains globally competitive. Our request reflects plans to invest in research and development by providing land grant universities with funding to upgrade their research infrastructure, including brick-and-mortar facilities and computing capabilities and networks. With this type of once-in-a-generation investment, we can position the U.S. agricultural

sector to take the lead in developing climate innovations that provide new economic opportunities for farmers, ranchers, and producers.

This investment would reposition the United States for long-term success in food and agricultural research, education, and Extension, accelerate rural and urban economic recovery, achieve more diversity and equity in agriculture, and create the next-generation infrastructure needed to address the food and production challenges of feeding a growing world population.

Sincerely,

National
